

# "OPEN WEB"

V E R S U S

# "DEEP WEB"

---

## WHAT'S THE DIFFERENCE?

---

"Open web" refers to websites or webpages that do not require a paid subscription to access

The information found here can be useful in a research project but may not be considered "scholarly"

Anyone can access the information found here through a Google search or another free search engine

Databases, journal articles, eBooks and other materials that require a paid subscription to access is sometimes referred to as the "deep web"

The information found here oftentimes undergoes peer- review and so is considered more "scholarly"

Check with your library or research institution to see what databases and journals they subscribe to and how to gain access
